

In the Specification:

Page 5, line 5, or after paragraph [0020] of the published application, please add the following paragraph:

Figure 10 is a cross section view of another embodiment of the wear member for use with the pin retainer shown in Figures 8 and 9.

Page 7, beginning at line 11, or paragraph [0026] of the published application, please amend the paragraph as follows:

An alternative embodiment for the pin retainer, denoted by reference numeral 19, is shown in Figures 8 and 9. This pin retainer has a base portion 6 and an extended portion 8. The extended portion has a band 10 with a wider diameter than the remaining sections of the extended portion. The outer section of the extended portion 8 of the pin retainer may be tapered to some degree to facilitate insertion into the opening 5. The band portion 10 of the pin retainer fits into a corresponding groove in the inner surface of the opening 5 to retain the pin retainer in the opening. The shape of the opening would correspond to the shape of the pin retainer so that the pin retainer would be inserted into the opening and its band would 'snap' into the groove thereby holding the pin retainer in the opening. As shown in Figure 9, the outer circumference of the pin retainer has two flat surface walls 12. These walls will correspond to two flat walls in the opening 5 to retain the pin retainer in a non-rotatable position in the opening.
